

Use-Case Flow

UC-03 – Book Vaccination Slot

Primary Actor: Citizen Registrant

Goal: Book an available vaccination appointment after confirming that the citizen is eligible for the required vaccination dose.

Preconditions

- 1 The Citizen Registrant has a valid registered profile.
- 2 The vaccination center has available appointment slots.
- 3 The citizen's vaccination history is available to the system.
- 4 The system can determine whether the required dose interval has been satisfied.

Postconditions

- 1 A valid vaccination appointment is recorded for the citizen.
- 2 The selected vaccination-center slot is marked as booked.
- 3 The citizen receives a booking confirmation.

Main Success Scenario

- 1 The Citizen Registrant selects the option to book a vaccination slot.
- 2 The system identifies the citizen and retrieves the vaccination history.
- 3 The system checks the citizen's eligibility for the required dose.
- 4 The system confirms that the minimum required dose interval has been satisfied.
- 5 The system displays available vaccination-center slots.
- 6 The Citizen Registrant selects a preferred available slot.
- 7 The system validates that the selected slot is still available.
- 8 The system records the vaccination appointment.
- 9 The system marks the selected slot as booked.
- 10 The system displays a booking confirmation to the Citizen Registrant.

Alternate Flow – A1: Required dose interval has not been satisfied

- 1 At Step 4, the system determines that the minimum required interval has not been satisfied.
- 2 The system prevents the Citizen Registrant from booking the next dose.
- 3 The system informs the Citizen Registrant that the dose is not yet eligible for booking.
- 4 The use case ends without creating an appointment.
